Slide 1: Administrative Official Training

- UHSAA High School Swimming | 2026–27
- Presentation developed by Sharen Portillo
- Presented by Braxton Evans

Presenter notes: Welcome. This is a practical training, not a substitute for current NFHS rules and UHSAA guidance.

Slide 2: Today's finish line

- At the completion of this training Administrative Officials will: understand the AO workflow, recognize when to pause results, work confidently with Meet Manager, and know when to involve the referee.

Slide 3: The AO: masters of the dry side of the deck

- Communication is key for the success of these athletes. WE ARE ALL A TEAM!
- Connect deck, timing, results, scoring, and referee
- AO / software operator: review, communicate, and document
- Implement approved corrections
- Spot inconsistencies before publication
- Document corrections and decisions
- Protect fairness and accuracy
- AO visual guide: 01 Check setup 02 Verify entries 03 Test timing 04 Back up database

Presenter notes: Reference NFHS Points of Emphasis; the AO should understand operational implications. Results changes and disqualifications must go through the referee. A time discrepancy should be handled through the referee.

Slide 4: 45-minute roadmap

- 5 min • Role and authority
- 7 min • Before the meet
- 10 min • Meet Manager workflow
- 8 min • Times, DQs, scoring
- 7 min • Scenarios
- 5 min • Closing results
- 3 min • Questions

Slide 5: Before athletes arrive

- Confirm meet setup, events, teams, pool course
- Verify timing system interface and backups
- Check entries, event order, and heat sheets
- Agree on correction and communication workflow
- AO visual guide: 01 Check setup 02 Verify entries 03 Test timing 04 Back up database

Presenter notes: Use the UHSAA Meet Manager guide and local host procedures (in the Google Drive).

Slide 6: Meet Manager: safe startup

- Open the correct meet database
- Verify meet name, date, course, events
- Check teams, athletes, and entries
- Confirm scoring settings with meet leadership
- Back up before major changes

Presenter notes: Menu locations differ by Meet Manager version; validate against the host installation.

Slide 7: Entries

- Check entry limits and eligibility
- Can run an eligibility report
- Review scratches and substitutions
- Communicate revised heats and lanes

Presenter notes: Never treat a software warning as an automatic rules decision.

Slide 8: Timing workflow

- Receive timing data for the correct event and heat
- Match lane and swimmer identity
- Investigate missing or implausible times
- Consult backup timing records as required
- Confirm before committing official results
- AO visual guide: 01 Select event 02 Verify heat + lane 03 Review time / DQ 04 Confirm, then score

Presenter notes: Show a real sample timing console printout if available.

Slide 9: HY-TEK: event processing loop

- Select event → check heat → import / enter times
- Verify lanes → review exceptions
- Apply approved DQs / corrections
- Score → review → release

Presenter notes: Demonstrate on a practice meet database; no live meet edits.

Slide 10: Timing discrepancy: what matters?

- Wrong lane or swimmer?
- Missing pad time?
- Backup watch available?
- Timing-system malfunction?
- AO visual guide: 01 Pause result 02 Collect evidence 03 Consult referee 04 Correct + recheck

Presenter notes: Do not prescribe a universal backup-time calculation without checking current NFHS rules and system evidence.

Slide 11: DQ handling

- Receive DQ information from the Referee
- Confirm event, heat, lane, swimmer, and reason
- Record according to meet procedure
- AO visual guide: 01 Official report 02 Match swimmer 03 Apply decision 04 Re-rank / re-score

Presenter notes: The referee handles rule judgments and disputes; the AO maintains an accurate record. We are a team: trust your AO team behind you. Not everything needs to go through the referee!

Slide 12: Scoring verification

- Check scoring configuration and meet format
- Confirm DQs, exhibition entries, ties
- Ensure relay and individual results are correct
- Review cumulative team scores
- Flag anomalies before publication

Slide 13: Scenario 1 • Missing touchpad

- Lane 4 finishes; the electronic pad shows no time. Two watches are available.
- What do you verify first?
- Who must be involved before results are finalized?
- Timing scenario adjustment in Hy-Tek (Sheila)

Presenter notes: Answer: confirm swimmer/lane, timing evidence, and governing timing procedures; coordinate with timing staff and referee.

Slide 14: Scenario 1 • Debrief

- Process results as soon as the event is closed by the Referee
- Collect timing evidence and verify lane
- Apply timing rules
- Document the approved official time
- Recheck placement and scoring
- Call an experienced AO if you have questions during the meet

Presenter notes: Avoid guessing a time or choosing the faster watch by default.

Slide 15: Scenario 2 • Late DQ

- An event has been scored. A valid DQ report is received afterward.
- What must change?
- What should be communicated?

Presenter notes: Discuss validation, referee authorization, and downstream results.

Slide 16: Scenario 3 • Wrong swimmer

- The heat sheet lists one athlete, but a different athlete appears in the lane.
- Is this a software edit or a rules issue?

Presenter notes: Answer: potential entry/substitution/rules issue; refer to the referee before making assumptions or changing identity.

Slide 17: Closing the meet

- Reconcile all events, DQs, times, and scoring
- Check relay results as applicable
- Review final results with referee
- Back up the database and preserve records (all timer sheets and DQ slips / logs)
- If you have any question, reach out to an experienced AO. You can always change things within the 48-hour period.

Presenter notes: UHSAA-specific submission deadlines and required sign-offs should be checked against the current handbook.

Slide 18: The newest change

- Before leaving the venue: send initial results to all coaches
- Coaches review within 24 hours for errors
- Change requests should be verified with the AO / Meet Referee
- 48-hour rule: the Final Meet Report and meet results are sent to utahtop50@yahoo.com
- Referee, AO and Host Coach must be cc'd when these results are sent
- All paperwork, including timer sheets and DQ information, shall be saved for the entire season

Slide 19: AO pocket checklist

- BEFORE: setup • entries • seeding • backups
- DURING: event/heat • times • DQs • scoring
- AFTER: verify • sign-off • export • send results to coaches • archive
- ALWAYS: communicate • document • defer rules calls

Presenter notes: Invite trainees to photograph this slide.

Slide 20: Practice • Verify a heat before scoring

- Illustrative results table (fabricated training data)
- Lane 2 • Alex Kim • pad 1:02.34 • backup 1:02.39 • review normal result
- Lane 3 • Jordan Lee • pad — • backup 1:01.82 • HOLD: missing pad
- Lane 4 • Taylor Reed • pad 1:03.21 • backup 1:03.18 • review normal result
- Discuss: what evidence is needed before lane 3 receives an official time?
- Follow timing rules; never invent an adjusted time.

Slide 21: Resources

- UHSAA swimming / official forms: https://uhsaa.org/uhsaa-swimming/
- HY-TEK Meet Manager 8 online manual: https://hytek.active.com/user_guides_html/swmm8/hmkwindex.htm
- HY-TEK time adjustments reference: https://activenetwork.my.salesforce-sites.com/hytekswimming/articles/en_US/Article/Time-Adjustments-Calc
- NFHS Rules Book (mailed after Arbiter registration)
- Sheila's Meet Set Up Guide: https://drive.google.com/file/d/1z6bPx5eYyQg3OXWixUB29lbBUMspWkki/view

Slide 23: Relay lead-off splits and eligibility

- Lead-off split: when a first relay leg can be recorded as an official time, including a legal start, stroke and finish.
- Disqualifications and entries: how unsporting conduct and entry violations can affect whether a lead-off time counts.
- Changes to lead-off swimmers: there shall be no change in the lead-off swimmer AFTER the long whistle (Rule 8-3-3, p. 70). Changing the order among swimmers 2, 3 and 4 is permitted.

Presenter notes: Verify the exact NFHS rule language before presenting a definitive answer.

Slide 24: Seeding and championship relay decisions

- Minimum heat occupancy: the minimum number seeded into a preliminary or timed-final heat when there is more than one heat.
- Prelims vs finals: in the same meet, prelims and finals (Rule 1-4-11b(2) NOTE), a swimmer may compete in a maximum of four events, only two of which may be individual events. A swimmer who swims two individual events plus all three relays across prelims and finals has swum five events and becomes illegal upon participation in the fifth.
- AO response: check entry limits and substitution requirements; refer any eligibility or legality determination to the meet referee.

Presenter notes: Locate the applicable seeding and relay participation provisions; the quiz itself doesn't establish the answer.

Slide 25: Timing equipment: know your sources

- Primary automatic timing: uniform electronic start with a touchpad finish.
- Backup sources: backup buttons and manually operated stopwatches are distinct evidence sources; record which device produced each time.
- Discrepancy threshold: a time difference of more than .3 triggers a potential discrepancy.
- NEVER mix data from different timing systems when doing timing adjustments.

Presenter notes: Identify primary pad, button and watch readings on a sample timing sheet.

Slide 26: Lane malfunction: never mix evidence casually

- First diagnose the pad: determine why the primary reading is absent or incorrect; compare the finish order and valid backups.
- Choose a valid replacement: average two valid buttons, or two valid watches; use one valid backup when only one exists.
- Avoid unsupported averages: do not average a button reading with a manual-watch reading; follow the governing timing procedure and referee direction.

Presenter notes: Buttons don't automatically outrank watches by themselves; one vs two backup methods; diagnose the pad error first; never mix backup types.

Slide 27: Timing exercise: which readings are trustworthy?

- Lane 3 • 50 freestyle — Pad 24.08 | Button 1 24.79 | Button 2 24.82 | Watch 1 24.75
- Which readings suggest a discrepancy? What evidence would you request before changing the result?
- Takeaway: identify the timing failure first. Document your reasoning and escalate the adjustment for appropriate review.

Presenter notes: Illustrative readings; not an official answer key.

Slide 28: Whole-heat timing malfunction

- Different from one bad lane: multiple unreliable primary readings require a coordinated review, not a series of guesses.
- Information to collect: primary readings if available • valid backups • verified finish order • timing-system incident details.
- An entry (seed) time is NOT evidence of the actual swim and is not used in a whole-heat adjustment.

Presenter notes: Confirm the official whole-heat adjustment method from the current rules.

Slide 29: Time precision and Meet Manager verification

- Reporting precision: results are reported to hundredths of a second.
- Software review: verify the imported time, any approved adjustment, the display precision, and the final published output.
- Habit to build: do not round, truncate, or change timing data manually without proving the pad wrong first.

Presenter notes: Confirm with the current NFHS rule text.

Slide 30: Certification review: rapid-fire scenarios

- A: A coach changes the relay lead-off after the race starts. Who must be notified?
- B: Pad time differs markedly from backups. What do you investigate before replacing it?
- C: A coach finds a results error after the meet. Who authorizes the correction, and how is the final report distributed?

Presenter notes: Explain evidence, rule, referee role and documentation for each case.
